Premont Causes Surprise.

(Washington Co. Louisville Post.)

A good deal of surprise is expressed over the declaration of Henry R. Prescott, State Insurance Commissioner of Kentucky, outlining his attitude toward Federal supervision of insurance companies.

There is a growing impression throughout the country, especially among the revelations growing out of the conduct of the insurance companies in New York, that Federal supervision would be a mighty thing for the policy holders.

The subject is going to be agitated vigorously and warmly at the coming session of Congress, and the movement for Federal supervision will be reinforced by a ringing paragraph in the President's message approving such legislation.

Mr. Prescott, however, can see no need of Federal supervision. In an interview, given in this city while en route to New Hampshire to attend the annual meeting of the Insurance Commission, in full as follows:

"I am hardly inclined to think," said he, "that Federal supervision of the insurance companies is either needed or desirable. The State officials who are appointed to watch over the companies would do so, and thoroughly able to do so."

There are in this country at the present time (as the statistics show) 200,000 families whose income is \$5,000 or more. Taken all together, they have the spending power of something like \$1,500,000,000—a sum at which nobody would for a moment think of sneering.

But, although the total income of these families, which in number is less than 2 per cent of the families in the United States, is so large, it is not so large as the total income of the "common people." There are nearly twelve million families in the United States, and the "common people," and their aggregate income is pretty nearly as large as the income of the "rich."

There are more than six and a half times the aggregate income of the rich and the "common people," and the aggregate income of the "common people" is nearly as large as the aggregate income of the "rich."
